The smart and lightweight vortex meter for monitoring low viscosity, water-like liquids

## > Introduction

Mass Flow ONLINE B.V. sells flow measuring and controlling products through the internet. From the website [www.massflow-online.com](http://www.massflow-online.com) flow meters or controllers can be ordered 24 hours a day 7 days a week. Most products are in stock and will be shipped world-wide within two working days.

## > Description

The new LIQUI-VIEW Base series offer a compact, lightweight and cost-effective solution for monitoring the flow or consumption of cleansing water, cooling water or spa water. The unique sensor body and transmitter design makes LIQUI-VIEW Base one of the most compact, lightweight vortex meters in the industry.

## > LIQUI-VIEW Base series

The LIQUI-VIEW Base series operate on the vortex principle. The obstruction (bluff body) placed in the flow of the liquid sheds vortices downstream at a frequency proportional to the velocity of the liquid. This pattern of vortices is named the Von Kármán vortex street. A piezo-electric sensor detects the vortices and creates electrical pulses which are proportional to the liquid flow rate.

The instruments may be mounted in any position.

LIQUI-VIEW Base flow meters can be supplied in ranges from 0,5 l/min up to 150 l/min at max. 12 bar pressure rating.

Furthermore the instruments can be supplied with a display for local readout and analog output or a pulse output.

<sup>1)</sup> Q = flow rate in l/min

Example for LVB-06-A used at a flow rate of 8 l/min: (240 \* 8<sup>2</sup>) / 100 = 153.6 mbar
