

Datasheet F-22xM

MFC for high-pressure / high- ΔP applications

> Introduction

Bronkhorst® model F-22xM Mass Flow Controllers (MFCs) are designed for high (differential) pressure applications up to 200 bar, and suited for precise control of virtually all conventional process gases. The MFC consists of a thermal mass flow sensor, a direct-acting, high-pressure control valve and a microprocessor based PID controller with signal and fieldbus conversion. As a function of a setpoint value, the flow controller swiftly adjusts the desired flow rate. The mass flow, expressed in normal litres or millilitres per minute or per hour, is provided as analog signal or digitally via RS232 or fieldbus. The flow range, wetted materials and orifice size for the control valve are determined depending of the type of gas and the process conditions of the application.

EL-FLOW Mass Flow Controller model F-221M

> Technical specifications

Measurement / control system

Accuracy (incl. linearity) (Based on actual calibration)	: $\pm 0,5\%$ Rd plus $\pm 0,1\%$ FS
Turndown	: 1 : 50
Multiple fluid capability	: storage of max. 8 calibration curves
Repeatability	: $< \pm 0,2\%$ Rd
Settling time (controller)	: typical 2 seconds
Control stability	: $\leq \pm 0,1\%$ FS (typical for 1 l _n /min N ₂)
Max. Kv-value	: $1,5 \times 10^{-3}$
Min. ΔP	: 2 bar(d)
Max. ΔP	: 200 bar(d)
Pressure sensitivity	: 0,1% Rd/bar typical N ₂ ; 0,01% Rd/bar typical H ₂
Temperature range	: -10...+70°C
Temperature sensitivity	: zero: $< \pm 0,05\%$ FS/°C; span: $< \pm 0,05\%$ Rd/°C
Leak integrity (outboard)	: $< 2 \times 10^{-9}$ mbar l/s He
Preferred mounting position	: horizontal
Warm-up time	: 30 min. for optimum accuracy 2 min. for accuracy $\pm 2\%$ FS

Mechanical parts

Material (wetted parts)	: stainless steel 316L or comparable
Pressure rating	: 200 bar(g)
Pressure tested	: 300 bar(g)
Process connections	: compression type or face seal male
Seals	: static: Viton; plunger: FKM
Ingress protection (housing)	: IP40

Although all specifications in this datasheet are believed to be accurate, the right is reserved to make changes without notice or obligation.

Electrical properties

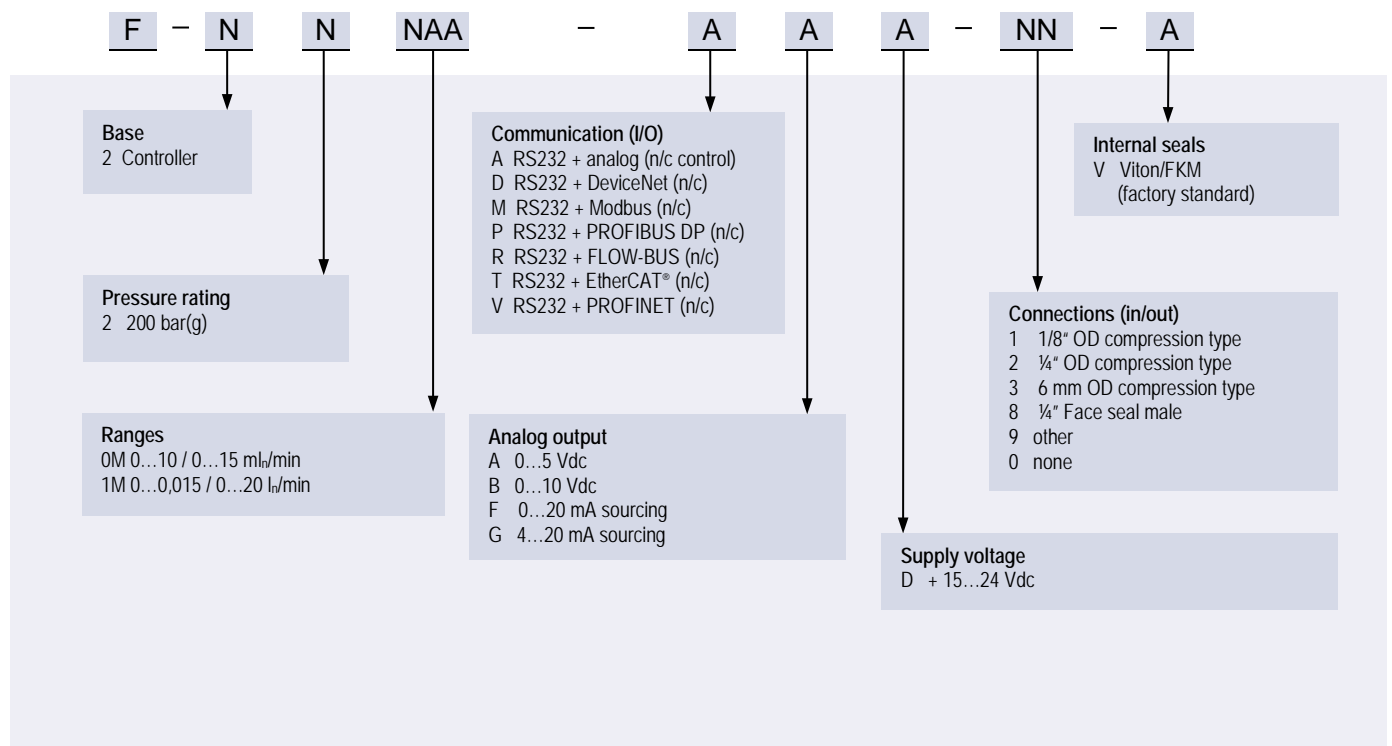

Power supply	: +15...24 Vdc $\pm 10\%$
Power consumption	: Supply at voltage I/O at current I/O (based on N/C valve)
	15 V 290 mA 320 mA
	24 V 200 mA 215 mA
Extra for fieldbus:	PROFIBUS DP: add 53 mA (15 V supply) or 30 mA (24 V supply)
(if applicable)	PROFINET: add 77 mA (15 V supply) or 48 mA (24 V supply)
	EtherCAT®: add 66 mA (15 V supply) or 41 mA (24 V supply)
	DeviceNet™: add 48 mA (24 V supply)
Analog output (0...100%)	: 0...5 (10) Vdc, min. load impedance $> 2 \text{ k}\Omega$; 0 (4)...20 mA (sourcing), max. load impedance $< 375 \text{ }\Omega$
Analog setpoint (0...100%)	: 0...5 (10) Vdc, min. load impedance $> 100 \text{ k}\Omega$; 0 (4)...20 mA, load impedance $\sim 250 \text{ }\Omega$
Digital communication	: standard RS232; options: PROFIBUS DP, DeviceNet™, PROFINET, EtherCAT®, Modbus RTU/ASCII, FLOW-BUS

> Ranges (based on Air)

Model	minimum	maximum
F-220M	0,2...10 ml _n /min	0,3...15 ml _n /min
F-221M	0,3...15 ml _n /min	0,4...20 l _n /min

Intermediate ranges are available

> Model number identification

> Thermal mass flow measuring principle

The heart of the thermal mass flow meter/controller is the sensor, that consists of a stainless steel capillary tube with resistance thermometer elements. A part of the gas flows through this bypass sensor, and is warmed up by heating elements. Consequently the measured temperatures T_1 and T_2 drift apart. The temperature difference is directly proportional to mass flow through the sensor. In the main channel Bronkhorst applies a patented laminar flow element consisting of a stack of stainless steel discs with precision-etched flow channels. Thanks to the perfect flow-split the sensor output is proportional to the total mass flow rate.

Functional scheme of the thermal mass flow sensor

> State of the art digital design

Today's EL-FLOW® series are equipped with a digital pc-board, offering high accuracy, excellent temperature stability and fast response. The basic digital pc-board contains all of the general functions needed for measurement and control. In addition to the standard RS232 output the instruments also offer analog I/O. Furthermore, an integrated interface board provides DeviceNet™, PROFIBUS DP, PROFINET, Modbus RTU/ASCII, EtherCAT® or FLOW-BUS protocols.

Functional scheme of the digital PC-board

> Hook-up diagram for analog or RS232 communication

> Hook-up diagrams for fieldbus communication

For the available fieldbus options we refer to the various hook-up diagrams as indicated below. If you are viewing this datasheet in digital format, you may use the hyperlink to each of the drawings. Otherwise please visit the download section on www.bronkhorst.com or contact our local representatives.

> Dimensions (mm) and weight (kg)

Dimension table adapters (RS-type)

Compression type		1/4" BSPP
		Size A
adapter 3 mm	OD	26.1
adapter 6 mm	OD	28.4
adapter 8 mm	OD	29.4
adapter 10 mm	OD	30.2
adapter 12 mm	OD	32.5
adapter 1/8"	OD	26.1
adapter 1/4"	OD	28.4
adapter 3/8"	OD	29.9
adapter 1/2"	OD	32.7
Face-seal male		Size A
adapter 1/4"	inlet	23.2

*) Dimension A is typical finger-tight.

> Options and accessories

- Free software support for operation, monitoring, optimizing or to interface between digital instruments and windows software.	
- IN-LINE filters for protection against particulates	
- BRIGHT compact local Readout/Control modules - E-8000 Power Supply	
- Interconnecting cables for power and analog/digital communication - PiPS Plug-in Power Supply	

> Alternatives

- PN200 IN-FLOW MFC with industrial (IP65) housing
